LOCATION
Agbor, Delta State, Nigeria

EDUCATION

University of Delta, Agbor
B.Eng Computer Engineering
200 Level · 2025/2026 Session

TECHNICAL SKILLS

HTML5

CSS3

JavaScript

TypeScript

React

Tailwind CSS

Framer Motion

Vite

Git & GitHub

Vercel

Formspree

C / C++

Node.js (learning)

CURRENTLY LEARNING

Full-stack development (Node.js, APIs, auth)
Cloud deployment & DevOps fundamentals

INTERESTS

Software engineering · Embedded systems
AI tooling · Entrepreneurship
Content creation

Profile

Computer Engineering student and frontend developer building and deploying real, paid websites for small businesses while studying engineering fundamentals. Comfortable choosing the right tool for the job — lean single-file HTML/CSS/JS for speed-critical sites, React/TypeScript with animation for premium brand experiences. Currently growing toward full-stack and cloud engineering, with a long-term goal of building products and an income stream that scales beyond freelance hours.

Experience

Freelance Web Developer

2025 – Present

Independent · Remote / Nigeria

- Designed, built, and deployed four client-ready websites end-to-end — from scoping and copywriting to deployment on Vercel — for businesses in cleaning services, fine dining, and fashion.
- Diagnosed and fixed five separate production-blocking issues in a broken Replit export (dependency, config, and environment errors) and shipped it live with zero downtime to the client.
- Built a WhatsApp-first conversion flow for a cleaning service client, removing form friction and routing every call-to-action directly into a real conversation.
- Set up Formspree-based contact and custom-order forms for client sites, eliminating the need for a backend on simple lead-capture flows.

Selected Projects

Cloud-9 — Fine Dining Restaurant

React · TypeScript · Framer Motion

Full restaurant site for an Abraka, Delta State establishment — cinematic loading sequence, scroll-animated menu reveal, and a reservations flow built to feel like a hospitality brand rather than a template.

Aurelius — Restaurant Rescue & Deployment

React · Vite · shadcn/ui · Vercel

Took over a broken Replit export with dead config, missing environment variables, and runtime-locked dependencies, and shipped it to production — five blockers resolved, zero shortcuts.

SparkleNeat — Cleaning Services

HTML · CSS · JavaScript

Single-file, zero-dependency site built WhatsApp-first for fast loading on low-bandwidth mobile connections, with every button routing straight into a chat with a real person.

Adire Couture — Fashion Brand

React · Framer Motion · Formspree

Editorial-style brand site for a Lagos-based designer with a working custom-order form, letting customers submit a design request directly from the collection gallery.

Strengths

- Ships real, deployed, paid work — not tutorial clones.
- Picks the right stack for the constraint: speed and simplicity vs. brand and motion.
- Debugs production issues independently across build tools, environments, and dependency systems.
- Balances full-time engineering coursework with active freelance delivery and a growing portfolio.
