PROFESSIONAL SUMMARY	
Frontend Developer and Computer Engineering student with hands-on experience building and deploying real-world websites for businesses in fashion, hospitality, and service industries. Skilled in React, TypeScript, JavaScript, and modern deployment workflows, with a track record of independently diagnosing and resolving production issues. Passionate about software engineering, scalable products, and solving real business problems through technology.	
TECHNICAL SKILLS	
Languages:	HTML, CSS, JavaScript, TypeScript, C, C++
Frameworks:	React, Tailwind CSS, Framer Motion, Vite
Tools:	Git, GitHub, Vercel, Formspree
Learning Now:	Node.js, REST APIs, Authentication, Cloud Deployment & DevOps
EXPERIENCE	
Freelance Frontend Developer	2025 - Present
<i>Independent · Remote, Nigeria</i>	
- Designed and deployed four production-ready websites for businesses in cleaning services, hospitality, and fashion, managing scope, copy, and delivery end-to-end. - Resolved five production-blocking deployment issues involving dependencies, build configuration, and environment variables on a client project, shipping it live with zero downtime. - Built WhatsApp-first customer conversion flows that removed contact-form friction and improved lead generation for service-business clients. - Implemented Formspree-powered contact and custom-order forms, eliminating the need for backend infrastructure on lead-capture sites.	
PROJECTS	
Cloud-9 - Fine Dining Restaurant	<i>React, TypeScript, Framer Motion</i>
Developed a modern restaurant website featuring a cinematic loading sequence, scroll-animated menu reveal, and a reservation flow designed to feel like a hospitality brand rather than a template.	
Aurelius - Restaurant Rescue & Deployment	<i>React, Vite, shadcn/ui, Vercel</i>
Recovered a broken Replit export with dead configuration, missing environment variables, and locked dependencies, and deployed it to production on Vercel.	
SparkleNeat - Cleaning Services	<i>HTML, CSS, JavaScript</i>
Built a lightweight, single-file website optimized for fast loading on low-bandwidth mobile connections, with every call-to-action routed into WhatsApp.	
Adire Couture - Fashion Brand	<i>React, Framer Motion, Formspree</i>
Developed an editorial-style fashion brand website with a working custom-order form, letting customers submit design requests directly from the collection gallery.	
EDUCATION	
University of Delta, Agbor	2025 - Present
<i>B.Eng. Computer Engineering — 200 Level, 2025/2026 Session</i>	
ADDITIONAL INFORMATION	
- Ships real, deployed, paid work rather than tutorial clones. - Selects the right stack for the constraint — lean HTML/CSS/JS for speed and simplicity, React with animation for premium brand experiences. - Debugs production issues independently across build tools, environments, and dependency systems. - Balances full-time engineering coursework with active freelance delivery and a growing portfolio.
